SUMMARY

AI engineer: agentic infrastructure, evaluation tooling, production systems. Shipped, tested, and published under one rule, check before you trust.

EXPERIENCE

WINNIIO / LifeAtlas, *AI Engineering Intern*

May 2026 – Jul 2026, Sweden (Remote)

- Led a six-person team rebuilding a production voice-interview pipeline in-house after a vendor's per-call cost became the real constraint on scaling, cutting cost roughly 20× with zero downtime during the swap.
- Original prototype ran voice in, Claude-based profile extraction, and ranked matching via pgvector and Voyage rerank on Retell AI and Twilio.

Stakrid Logistics Private Limited, *Lead Engineer*

Jan 2025 – Jan 2026, Noida, India

- Built a last-mile logistics platform solo, serving local restaurants and their delivery riders: 40+ REST endpoints (Java, Spring Boot) on GCP with CI/CD, load balancing, and monitoring.
- Query optimization and connection pooling cut manual processing 80% and API latency from 800ms to under 200ms.
- Integrated Supabase, payment gateways, and SMS APIs with retry logic. Wound down deliberately once it had run its course.

PROJECTS

Hunt (gogethunt.com)

Jul 2026 – Present

- AI accounts-receivable platform: deploys AI Personas to chase overdue B2B invoices while preserving the client relationship, rather than escalating straight to collections.
- Accepted into Microsoft for Startups, NVIDIA Inception, and Sarvam's Startup Program.

Agent Reliability Stack (Python, Claude API, FastAPI, Neo4j, pgvector, Voyage AI, Redis, GitHub Actions) Jun 2026 – Present

- Eval harness with pluggable scorers (exact, regex, embedding, LLM-as-judge) and LCS-based trajectory scoring on tool-call sequences, thread-pooled with failure isolation.
- Validated the LLM-judge scorer against 60 human-labeled cases before trusting it: exact-match 0.867, embedding similarity 0.984, calibrated judge 1.000. Wired into GitHub Actions as a baseline-diffed regression gate.
- LLM gateway backed by a Neo4j memory graph. One Voyage-3.5 embedding call drives semantic cache lookup, graph seeding, and write-back together; cache misses trigger a 1–2 hop graph walk that injects ranked context.
- Auto-fallback to a secondary model tier on 429/timeout/5xx, with per-call cost attribution by user and feature.

Relogged: Sandboxed Tool-Call Replay Debugger (Python, LangGraph, Postgres)

Jul 2026

- Zero-code-change recorder that monkeypatches `CompiledStateGraph` and `ToolNode` via a scoped `@record()` contextvar. Pure replay reconstructs a run from the database alone with zero live model, tool, or graph invocation.
- Fork replay resumes from any LangGraph checkpoint with one changed value, isolating what a different decision would have produced. A sandbox test poisons the real tools to prove pure replay never touches them.

RESEARCH

Auditing Evaluation Leakage in F1 Race-Strategy ML (doi.org/10.5281/zenodo.21862868)

Jul 2026

- Found a prior lap-time pipeline's $R^2=0.994$ was leakage from row-wise splits plus one-hot track features; a corrected track-aware protocol restored an honest $R^2=0.991$.

Vyaskosh / VAYAS: Age-Stratified ASR Fairness Audit (*published, Zenodo*)

2026

- Portable audit protocol for elderly-speaker ASR evaluation, following the Gender Shades build-benchmark-audit methodology across Indo-Aryan and Dravidian languages.

Chakra47: Autonomous OS for Physical AI (chakra47.com)

Dec 2025 – May 2026

- Four-layer LangGraph multi-agent swarm with neuro-symbolic governance (YOLOv8 + Open Policy Agent), presented at the India AI Impact Summit 2026 and AICraft 3.1.

EDUCATION

Amity University Noida, *B.Tech, Computer Science, AI & ML Specialization*

Aug 2023 – Jul 2027, Noida, India

- Self-study: Stanford CME295 (Transformers & LLMs); Andrej Karpathy's *Neural Networks: Zero to Hero*.
- Certifications: Machine Learning Specialization (Andrew Ng, Stanford/Coursera) · NCA-AIIO: AI Infrastructure & Operations Associate (NVIDIA, in progress) · Java Spring Framework 6 with Spring Boot 3 (Udemy) · Build and Secure Networks in Google Cloud (Google Cloud Skills Boost).

SKILLS

Languages: Python, Java, SQL, Bash

DSA: Arrays, Linked Lists, Trees, Graphs, Dynamic Programming, Recursion, Sorting, Sliding Window, Two Pointers

Agentic & AI Infra: LangGraph, LangChain, Claude API, RAG, pgvector, Voyage rerank, Open Policy Agent

ML & CV: PyTorch, TensorFlow, CNNs, RNNs, LSTMs, Transformers, YOLOv8, OpenCV, Hugging Face

Backend: Spring Boot, REST API Design, FastAPI, Spring Data JPA, PostgreSQL, Neo4j

Cloud & DevOps: Google Cloud Platform, Docker, CI/CD, GitHub Actions, Supabase
